

Streamline Med Rec, Improve Med Adherence, and Reduce Readmissions With Three Simple Additions to Your Epic EHR

Med Management solutions from DrFirst support native workflows, require no additional training, and implement within hours, not days.

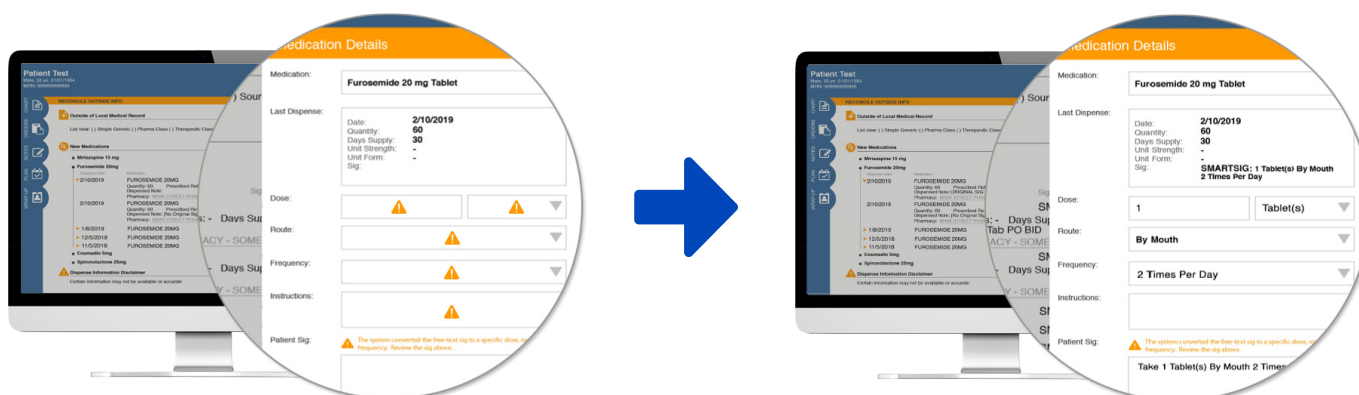

DrFirst's Medication Management solutions address multiple factors that lead to low medication adherence and hospital readmissions. These services include:

- **The most complete and clinically actionable external medication history source available within the Epic EHR;** powering native workflows and converting free-text information into actionable medication data
- **The industry's first price transparency solution which completes prescription benefits coverage from payers** directly within the Epic native Realtime Prescription Benefits (RTPB) workflow
- **Epic-integrated automatic secure text messaging that engages patients** after a prescription is sent to the pharmacy to reduce prescription abandonment and help prevent hospital readmissions

Improve Medication Reconciliation Efficiency and Adherence Scores With MedHx

Epic users can now find medication history data on more patients with native integrations from DrFirst. Our MedHxSM data sources include the same national pharmacies and PBM information provided by other medication history vendors, along with additional data specifically for your patient population, made available through our independent relationships with local and community pharmacies, and EHRs.

When combined with SmartSuiteSM, our patented artificial intelligence (AI) technology allows Epic clinicians to easily import medication history versus having to manually enter—typically resulting in:

80% Reduction in Clicks and Keystrokes

Up to **30** Seconds Saved for Each Medication

93% Sigs Translated and Prepopulated

Clinicians can also access our web application, **MedHx Companion**, which provides actionable clinical intelligence in a visual and easy-to-understand timeline view of medication adherence gaps and fill meters, along with the ability to filter medications by drug class.

And finally, accurate and clinically actionable medication history data is now available in Epic's native Medication History for Populations. MedHx Population Risk Management (PRM) within Epic can help hospitals and health systems better manage high-risk populations to uncover medication non-adherence, keep patients on their treatment plans, and reduce readmissions.

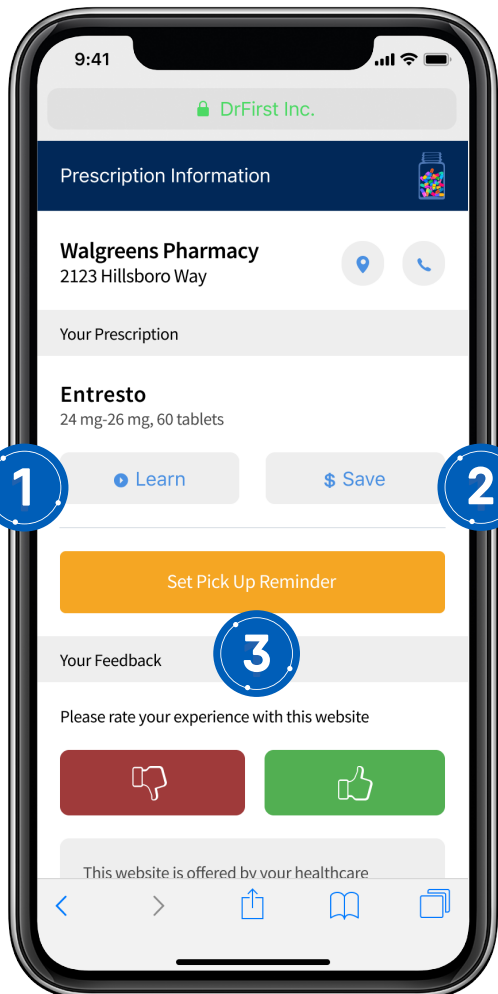

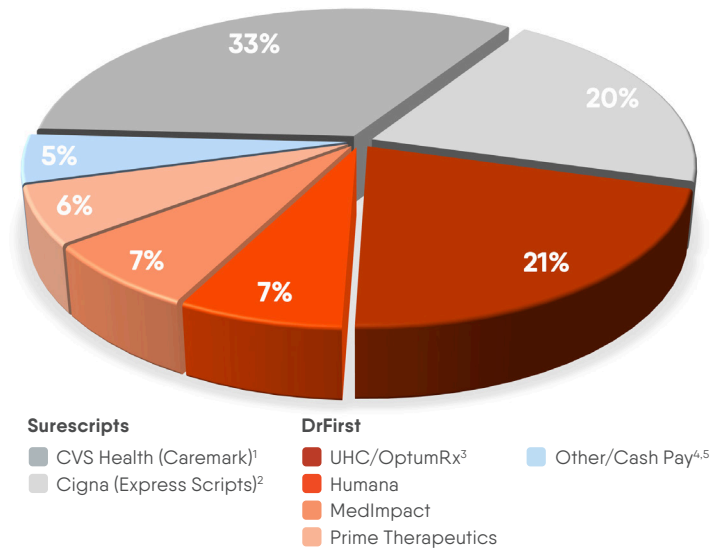

Epic Users Can Now Access 46% More Real-Time Prescription Benefits

Value-based healthcare demands a new level of transparency that gives providers and patients the tools to make better-informed decisions on the best therapies they can afford to achieve the best quality outcomes.

myBenefitCheckSM provides real-time prescription benefit information directly within the Epic native RTPB workflow from sources like:

- United Healthcare
- Humana
- DST-Cigna
- MedImpact
- Prime Therapeutics
- and more

PBM National Market Share

Reduce Hospital Readmissions by Increasing Medication Adherence

One in four new prescriptions is never filled because of concerns over efficacy or side effects, high copay or deductible, or simple procrastination or forgetfulness. RxInformSM automatically engages patients outside the hospital or exam room minutes after their prescriptions are sent to the pharmacy through an SMS text message guiding them to a secure website without the need to download an application.

- 1 **Learn:** Address clinical concerns
- 2 **Save:** Overcome financial barriers
- 3 **Act:** Commit to pickup prescription

Hospitals using RxInform typically see a 5% reduction in prescription abandonment rates and 95% of patients receiving texts respond favorably.

Now available in App Orchard.
