

# 4 Additions to Your Epic EHR

## Improve Med Rec, Med Adherence, Prescription Renewals, and Patient Engagement

Medication management solutions from DrFirst support native Epic workflows, require no additional training, and implement within hours, not days. Get solutions for common challenges that can lead to low medication adherence and hospital readmissions:

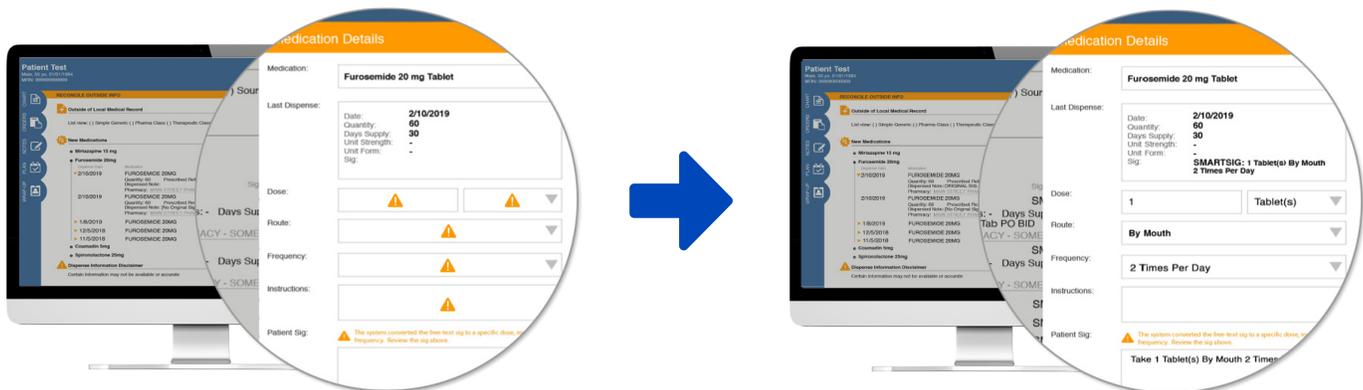

- **The most complete external medication history source available within the Epic EHR** powers native workflows, converts free text into actionable medication data, and safely infers missing information
- **The industry's first price transparency solution delivers prescription benefits coverage from payers** directly in the Epic Real-Time Prescription Benefits (RTPB) workflow
- **Automatic secure text messaging engages patients after a prescription is sent to the pharmacy** to reduce prescription abandonment and help prevent hospital readmissions

### Improve Medication Reconciliation and Adherence Scores

Find medication history data on more patients with native Epic integrations.

MedHx<sup>SM</sup> data sources include the same national pharmacies and PBM information provided by other medication history vendors, plus data specifically for your patient population based on our relationships with local and community pharmacies and EHRs.

Combined with the SmartSuite<sup>SM</sup> patented AI technology, MedHx allows clinicians to easily import medication history into Epic with less manual entry, with results such as:

**80%** Reduction in Clicks and Keystrokes

Up to **30** Seconds Saved per Medication

**93%** Sigs Translated and Prepopulated

MedHx Companion is a web-based application that delivers a visual, easy-to-understand timeline view of medication adherence gaps and fill meters, plus the ability to filter medications by drug class.

MedHx Population Risk Management (PRM) within Epic helps hospitals and health systems manage high-risk populations by monitoring medication adherence to keep patients on their treatment plans and reduce readmissions.

## Epic Users Can Access More Real-Time Prescription Benefits

Value-based healthcare demands a new level of transparency that empowers providers and patients to make better-informed decisions and achieve the best quality outcomes. DrFirst was first to deliver price transparency to providers at the point of care and we have processed more than 265 million transactions to date.

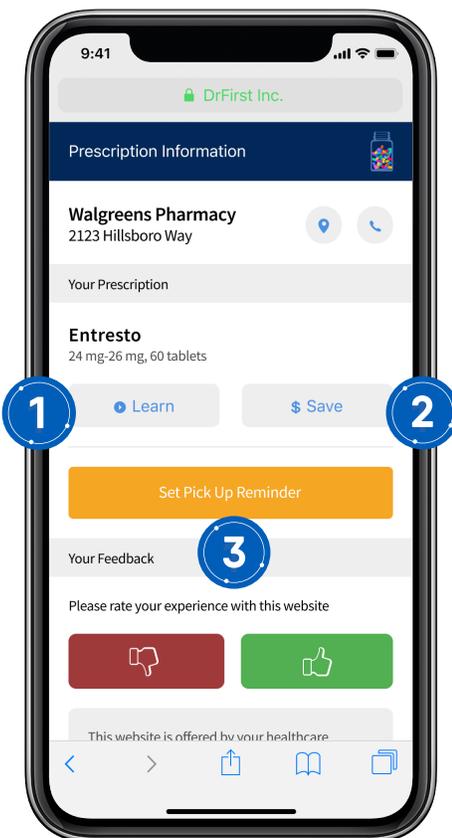

myBenefitCheck<sup>SM</sup> provides real-time prescription benefit information directly within the Epic native RTPB workflow from Surescripts sources that cover CVS and Express Scripts, plus data from: **UnitedHealthcare/OptumRx, Humana, SS&C Health (formerly DST Pharmacy Solutions), MedImpact, Prime Therapeutics, and Independent Health.**

## AI Automates Prescription Renewals So They're Easy and Efficient

What if the providers at your ambulatory practices could safely confirm and renew prescriptions with fewer clicks and keystrokes? You'd have more efficient workflows, fewer medication errors, and improved patient safety. You'd also have happier clinicians who spend less time on data entry and more time caring for patients.

SmartRenewal<sup>TM</sup> improves the prescription renewal workflow by safely adding missing medication details with patented AI. Instead of standard sig-mapping tables that need to be maintained by your IT team, SmartRenewal prepopulates all discrete fields with consistent terms that your organization uses.

## Reduce Hospital Readmissions by Increasing Medication Adherence

One in four new prescriptions is never filled because of concerns over efficacy or side effects, high copay or deductible, or simple procrastination or forgetfulness.

RxInform<sup>SM</sup> engages patients outside the hospital or exam room minutes after their prescriptions are sent to the pharmacy through an SMS text message guiding them to a secure website. There's no need to download an application.

- 1 **Learn:** Address clinical concerns
- 2 **Save:** Overcome financial barriers
- 3 **Act:** Commit to pick up prescription

**Hospitals using RxInform typically see a reduction in prescription abandonment rates and 95% of patients receiving texts respond favorably. Now available in the Epic App Market.**

**Contact your Enterprise Sales Representative to see how DrFirst's medication management solutions can enhance your Epic EHR.**
