Native Medication History Solutions for Epic Hospitals and Health Systems

Improve Medication Reconciliation Efficiency and Adherence Scores with MedHx and SmartSuite

Epic users can now find clinically actionable medication history data on more patients with native integrations from DrFirst. Our data sources include the same national pharmacies and pharmacy benefit manager (PBM) information provided by other medication history vendors, plus additional data for your patient population, made available through our independent relationships with local and community pharmacies and EHRs.

On top of expanded data sources, our patented artificial intelligence (AI) technology provides Epic clinicians with actionable medication history they can easily import versus having to manually enter. We leverage AI to translate free text, infer, and prepopulate discrete fields within a patient's medication list. Clinicians using MedHx and SmartSuite typically see:

80% Reduction in Clicks and Keystrokes	Up to **30** Seconds Saved for Each Medication	**93%** Sigs Translated and Prepopulated

MedHx and SmartSuite help improve provider satisfaction and patient safety by reducing both inefficiency and errors caused by unnecessary manual entry. Improving medication history data doesn't just help streamline your med reconciliation program; improved data quality provides more accurate medication adherence scores and ultimately provides better population health management.

With just a simple URL exchange and as little as ten hours of IT resources, your hospital system can increase your medication accuracy. And, there is no additional training or change of workflow needed.

Compare for Yourself

	SOURCES & FEATURES	OTHER VENDORS	DRFIRST
